An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Please replace the **Abstract** with the following (single paragraph):

**--Abstract of the Disclosure**

Provided is a conductive paste which can have high conductivity even if the sintering temperature is 500° C or less, and which does not cause an interference pattern or crack on a substrate even if a thick film thereof is formed on the substrate. The conductive paste comprises main components including a metal powder, a glass frit, and an organic vehicle. The metal powder is composed of spherical particles (A) having an average primary-particle diameter of 0.1 to 1  $\mu\text{m}$  and spherical particles (B) having an average primary-particle diameter of 50 nm or less, and the content of spherical particles (A) ranges from 50 to 99 wt% and the content of spherical particles (B) ranges from 1 to 50 wt%. The content of the glass frit ranges from 0.1 wt% to 15 wt% to the total amount of the glass frit and the metal powder. Preferably, the glass frit does not contain lead and has a working point of 500°C. or less, and the average particle diameter thereof is 2  $\mu\text{m}$  or less. The present invention can widely be applied to print on a substrate and sinter so as to form an electric circuit on the substrate.--
